PROFILE

Computer Science graduate specializing in Artificial Intelligence, seeking an AI Engineer, Data Scientist or related role to apply strong technical fundamentals, automation skills, and collaborative problem-solving to real-world engineering problems.

EDUCATION

BINA NUSANTARA UNIVERSITY Jakarta, Indonesia
Bachelor of Computer Science 2022 - 2026
Major in Computer Science
Cumulative GPA: 3.84/4.00 (Magna Cum Laude)

WORK EXPERIENCE

PT Bank CIMB Niaga
Data Analyst Internship Feb 2025 – Feb 2026

- Created tools and dashboards to summarize internal data and insight of the internal Compliance Division.
- Created requirements for Generative AI implementations for the internal use.
- Acted as a liaison between the IT Developer and the Compliance Division.
- Developed an automated web scraping tool to monitor regulatory updates across official portals, automating real-time alerts and recurring compliance reports.

ACTIVITIES

BINUS BLOCKCHAIN AND CRYPTO CLUB Jakarta, Indonesia
Research and Development Staff Sep 2024 – Aug 2025

- Analyzing actual data and news for news content on BBCC social media.
- Searching and developing new technologies or ideas to be implemented inside BBCC.

DATA SCIENCE CLUB BINUS Jakarta, Indonesia
Education and Development Activist Jul 2023 – Feb 2024

- Providing a learning materials that will be given to DSC members during the monthly class.
- Working in a team to ensure the monthly class to run effectively.

PROJECTS

COST-OPTIMIZED MULTIMODAL LLM ROUTER WITH LOCAL STT AND TOOL CALLING
Architected a FastAPI backend orchestrating LangGraph workflows. The system transcribes audio locally via NVIDIA Parakeet-TDT v3 STT Pipeline or direct text input, classifies prompt intent, and dynamically routes requests between lighter LLM and web-search-augmented frontier LLM to optimize latency, API costs, and accuracy.

IMAGE OVERSAMPLING ENHANCEMENT INTEGRATED KOLMOGOROV-ARNOLD NETWORKS
Integrated Kolmogorov-Arnold Networks (KAN) into the DeepSMOTE architecture to tackle image class imbalance. Evaluated performance against traditional MLP layers, demonstrating latent representation compression while maintaining comparable classification accuracy and parameter efficiency. (Published in IEEE Xplore)

MONKEYPOX PREDICTION USING MACHINE LEARNING
Developed and evaluated machine learning models on Kaggle tabular data to classify monkeypox infection from clinical symptoms. Deployed on Streamlit web application for real-time symptom input and instant inference.

ADDITIONAL

Technical Skills: Python, C++, JavaScript, SQL, PyTorch, Scikit-learn, OpenCV, Git, LangGraph, FastAPI, React.
Languages: Bahasa Indonesia, English.
Competition: First Place Winner of TECHFEST Competitive Programming 2024.
Certifications & Training: Building Transformer-Based Natural Language Processing Applications, Fundamentals of Deep Learning - NVIDIA DLI; Machine Learning with Python, Python 101 for Data Science - Cognitive Class
